

Send Mails Using HTML Only

Html Email Tag

HTML `<a>` tag provides you option to specify an email address to send an email. While using `<a>` tag as an email tag, you will use **mailto: email address** along with href attribute. Following is the syntax of using mailto instead of using http.

```
<a href = "mailto: contact@learnprogramo.com">Send Mail</a>
```

Add CC & BCC

And, HTML5 even allow you to insert **Carbon Copy**(CC) and **Blind Carbon Copy**(BCC) fields when you open the new mail. Use the below code, if you want to create an email link with **CC & BCC** attributes with "href"

```
<a href = "mailto: contact@learnprogramo.com ?  
cc = jay@gmail.com & bcc = abc@gmail.com">Send Mail</a>
```

Add Multiple Email

HTML `<a>` tag provides you option to multiple email address to send an email. Following is the syntax of using mailto instead of using http.

```
<a href = "mailto: contact@learnprogramo.com,  
jaydeepdahiwal75@gmail.com">Send Mail</a>
```

For Example

Below is the best example of code using all the attributes used in sending the mail.

```
<a href = "mailto: contact@learnprogramo.com ?  
cc = "jay@gmail.com & bcc = abc@gmail.com &  
Subject = Please Follow Us">Send Mail</a>
```

Add Subject

What about **inserting a subject** line also in the email hyperlink ? you can easily add a subject to your **email** by using the below **HTML Code**.

```
<a href = "mailto: contact@learnprogramo.com ?  
Subject = Please Follow Us">Send Mail</a>
```
